

1

How many layers are there in the IP Stack and What are they?

5 they are the Physical Network Layer, Internet layer, Transport layer and Application layer and Data Link Layer

Explanation:

Knowing what the layers are for sending and receiving Packets

2

What is an important difference between TCP and UDP

TCP is a connection orientated protocol and UDP is a Connection-less protocol

Explanation:

TCP is setting up a connection between the sender and receiver before anything is sent

UDP does not need a connection to send anything
